

Quick Start Engagement

You have questions on how to get started and what to do first. We can help by sending a Professional Services consultant to your facility to cover the essentials of JReport Designer and JReport Enterprise Server. We meet with your team to understand your needs and develop a plan to get you comfortable and productive with our products in a matter of days!

Our typical program starts with accelerated training that focuses on your essential needs. We combine training with hands-on exercises to get your staff comfortable with JReport's features and functions. Then we introduce you to our development methodology and work with you to make measurable progress on real business challenges that you're trying to solve.

We realize that your time is very valuable and you need to get productive NOW! We'll work with you to define focused, achievable goals that can be achieved in a matter of days. One of our senior consultants will work with your staff to build functional prototypes of real reports. And we can take it to the next step and refine them into polished production-ready reports. We'll take it as far as you want to go.

Your team will get immersed in our products and methods and become empowered to develop embedded, actionable reports on their own.

The first step is to contact your Enterprise Account Manager at sales@jinfonet.com. Our professionals will make an assessment of your situation, discuss options, and make recommendations for next steps that fit within your time and expense budgets. At no obligation to you!

Ask about bundling a Quick Start engagement with your software licensing purchase. There is no better way to prepare your team for long-term success with Jinfonet Software and JReport than completing a Quick Start engagement.
