

Jinfontet provides a variety of training options: Custom, Classroom, and Web-based training. We offer introductory training sessions as well as advanced training topics that can address all of your needs. Attendees who successfully complete training sessions will be certified and ready to start designing and developing their own JReport reports.

A commitment to training is an investment that really pays off. Our certified trainers deliver structured training that gives your staff the knowledge and experience that are critical to success. Graduates gain the skills needed to ensure effective product use, enable successful deployment, and avoid potential risks as your reporting solution needs grow.

Custom Training

We recognize that each of our customers has unique training needs. With Custom Training, Jinfontet Certified instructors deliver training and consulting services tailored to meet the specific business and reporting challenges that your organization is facing. We start with an assessment of your reporting requirements, develop focused training sessions, and work with your team in a 'workshop' format to deliver the sessions. We will cover the topics most important to you: product features and functions, code samples, exercises, deployment options and system administration. You'll get exactly what you need to make the most out of JReport Designer™ and JReport Enterprise Server™.

Classroom Training

Certified instructors cover three days of structured task-based training, including hands-on exercises where students develop and publish reports that they create during the training sessions.

Options

- Attend public training at Jinfontet Software in Rockville, Maryland.
- Onsite training at your facility delivered by Jinfontet instructors.

Web-Based Training

Web-based presentation of the classroom-training curriculum is available and it can be tailored to your schedule and level of need. This training provides live Web and audio access to an experienced Jinfontet instructor. Our standard offering covers three days of structured task-based training.
