## Embed. Customize. Scale.

The speed and competitiveness of today's markets demand reporting and analytics solutions that can quickly integrate into any technology environment and efficiently scale to support the most intense loads. To achieve this, a highly interactive, high-performance solution is needed that delivers data in real time. JReport is the fast, robust, and flexible solution that empowers companies to create and embed advanced dashboards, reports, and analytics.

### Embedded Analytics

JReport enables you to embed reports and analytics within your applications. You can integrate JReport as a natural extension of your existing applications delivering interactive web reports, dashboards, and charts to provide analysis. Your applications will be able to take advantage of JReport's intuitive, customizable interfaces for accessing and interacting with business-critical information.

### Empower Your Users

JReport empowers the business user by putting self-service discovery and report building capabilities in their hands. This reduces the reliance on IT staff when critical reports are needed for immediate business decisions. Users carry out filter, sort, drill down, pivot, slice & dice, rotate, and convert for unmatched flexibility and insight to your data. JReport provides an instant boost to your product's reporting and analytics capability.

### Your Look and Feel

JReport supports developers in their quest to deliver private labeled reports and dashboards. From colors and graphics to entire styling themes and beyond, JReport is designed for seamless integration into other applications so you can stay focused on growing your product's brand identity. For companies seeking an even more custom-tailored analytics experience, developers can implement custom menu options and control workflow via APIs.

### The Most Advanced Reports

Customers consistently choose JReport because it was the only product that allowed them to achieve their desired report format. Powered by an intuitive visual design environment, robust APIs, hundreds of prebuilt charting objects including our compound crosstabs which allow you to visualize multiple aggregate dimensions at once, JReport shines even with your most demanding visualization requirements.

### Scale for Any Workload

Since information demands are dynamic and continually growing, JReport is designed to expand as your needs grow, whether you require cloud operations, big data, or burst reporting. JReport scales for your new enterprise initiatives calling for fast and sophisticated analytics.

## JReport Server

JReport Server delivers self-service reporting and analysis. JReport Server is easily embeddable to run on all enterprise platforms. Moreover, JReport's architecture has been designed for high performance, scalability, and management while providing a customizable reporting experience. JReport Server provides self-service capabilities such as:

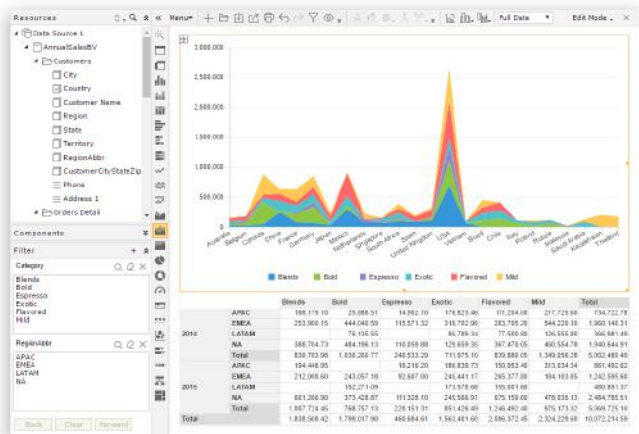

- Browser-based report authoring
- Rich, interactive dashboard and analysis experience
- Lower total cost of ownership

## Interactive Visual Analysis

Enable agile, self-service data discovery with Visual Analysis, which you can mash up with other charts, tables, and cross-tabs into a single dashboard. Transform data into rich visualizations for exploring data from different angles – easily, without expert assistance.

- Use dimensions & measures to quickly highlight colors, sizes & shapes
- Quickly tailor data visualizations with over 50 options
- Powerful in-memory cube technology

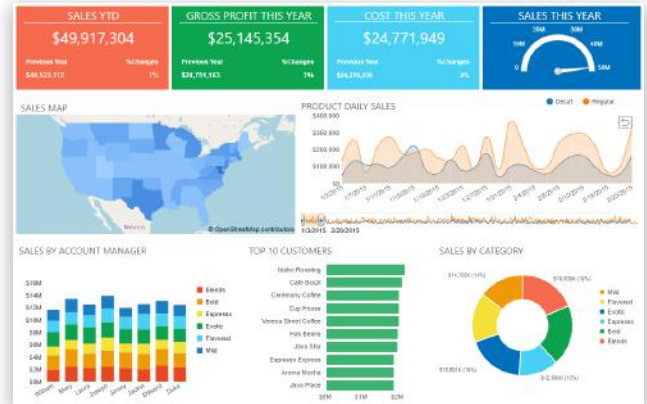

## ABOUT JINFONET SOFTWARE

Jinfonet empowers companies to embed the most sophisticated reports and dashboards into web applications. Through the JReport analytics platform, developers and users gain advanced visualization capabilities with any data source. Every day, JReport delivers insights for hundreds of thousands of users at over 10,000 installations worldwide.

## Smart Dashboards

JReport Dashboards allow you to empower users to drag and drop dashboard widgets such as charts, maps, tables and crosstabs across a set of tabbed dashboards and combine them with any of JReport's interactions including on-screen filters, slider controls, and detailed drill downs. You can embed JReport Dashboards into existing applications for better decisions when they matter most.

- Easy integration with 3rd party components including Google Maps and OpenStreetMap
- Responsive interfaces with cross-widget synchronization
- Extensive charting library for rapid dashboard assembly

## Responsive Analytics for Any Device

Empower customers to access their business metrics with JReport's responsive reports and dashboards. Whenever you embed JReport for mobile access, our dashboards, reports, and charts will scale and fold to best utilize available screen space. With responsive interfaces, there are no restrictions on where and which device is used to explore your data.

- Responsive dashboard, report, and chart interfaces that let users easily interact with their vital data on-the-go
- Optimized algorithms for scaling and folding that result in better screen layouts for analytics
- Embeddable into any web application (no programming)
